Investment Memorandum

GEX USDT Income

Terms, income, fees and risk information for the GEX USDT Income product range.

Applies to the 90-day, 180-day and 365-day product range.

90 days

3.80%

Net target p.a.

180 days

4.50%

Net target p.a.

365 days

5.00%

Net target p.a.

Target returns are not guaranteed. Capital is at risk.

Version 1.0 / 8 October 2026

PRODUCT INFORMATION · READ WITH YOUR SUBSCRIPTION AGREEMENT

Read this memorandum together with the subscription agreement and the terms presented for your account. The legal counterparty, asset-holding arrangements and settlement conditions are disclosed before you commit funds. Availability is subject to account and product eligibility.

Product overview

A fixed-term USDT income product within the GEXFI account experience.

GEX USDT Income is designed for eligible customers who purchase USDT through GEXFI and wish to allocate a portion of their balance for a defined period. The product has three terms: 90 days, 180 days and 365 days. Subscriptions, income illustrations and redemption amounts are denominated in USDT.

The product connects income holdings with GEXFI Wallet and, separately, eligible card funding services. An Income holding is not available wallet cash and cannot be spent directly using a card. At maturity, the redemption process returns the payable amount to the customer’s GEXFI Wallet before any further transfer or card funding transaction.

Product at a glance

Feature	Description
Product name	GEX USDT Income
Denomination	USDT
Terms	90, 180 or 365 calendar days
Target annualized rates	3.80%, 4.50% and 5.00%, respectively
Rate basis	Net of the product management fee; before separate transaction costs and personal taxes
Eligible funding	Qualifying USDT purchased through GEXFI
Access to funds	Fixed term; redemption at maturity, under the applicable redemption terms
Minimum subscription	The current minimum and maximum are displayed before subscription confirmation

Target returns are objectives, not a guarantee. The amount ultimately payable may be lower than an illustration, and capital may be lost. This is not a bank deposit or a Tether-issued income product.

Who should consider the product?

Customers should be able to leave the subscription amount invested for the full term and accept investment and digital-asset risks. The product is not designed for emergency funds or balances needed for near-term spending. Eligibility remains subject to account approval, product availability and applicable service restrictions.

Terms & target returns

Compare the annualized target and the illustrative return over each full term.

Product	Term	Net target p.a.	Illustrative term return
USDT Income 90	90 days	3.80%	0.9370%
USDT Income 180	180 days	4.50%	2.2192%
USDT Income 365	365 days	5.00%	5.0000%

Rates are expressed on an annualized, simple-interest basis using a 365-day denominator. They are not APYs and do not assume reinvestment or compounding. A 3.80% annual target over 90 days does not mean a 3.80% return after 90 days.

Illustration: 1,000 USDT for one full term

Term	Target income	Principal + target income
90 days	9.37 USDT	1,009.37 USDT
180 days	22.19 USDT	1,022.19 USDT
365 days	50.00 USDT	1,050.00 USDT

Illustrations assume the full amount is accepted, held for the entire term and earns the stated target. Figures are rounded to two decimals for display. They are not forecasts of actual performance, confirmed payment amounts or minimum subscription amounts.

Your subscription confirmation

Your subscription confirmation identifies the product, accepted amount, target rate, fee basis, start date, maturity date and applicable document version. The effective start and maturity timestamps are recorded in the confirmation. Calculations use the full underlying precision; customer-facing illustrations are rounded to two decimals, and the settlement statement records the payable USDT amount and any rounding adjustment. A rate shown for a new product is not authority to rewrite an existing customer's agreed terms.

No automatic reinvestment assumption

Maturity does not imply automatic renewal. Any future reinvestment would require a separate instruction or an expressly agreed mandate, at the terms available for that new subscription.

Eligibility & subscriptions

The initial product is limited to qualifying GEXFI-purchased USDT.

A GEXFI account or wallet balance does not itself establish product eligibility. Account and product checks apply. Direct external-USDT deposits are not eligible for the initial Income product.

Funding source	Initial product treatment
Qualifying USDT bought through GEXFI	May be used for subscription after purchase settlement and eligibility checks
USDT deposited directly from an external wallet	Not eligible for Income subscription
A balance reserved for another transaction	Not available for a new subscription
Unsettled or pending purchase proceeds	Not eligible until settlement and any required review are complete
Visa Card balance	Not treated as subscription funds merely because the card is linked

Subscription process

01 Review the product

Select a term, read the memorandum and applicable agreements, and review the target return and exit rules.

02 Confirm eligible funds

Check the settled, available amount eligible for subscription. Calculator presets do not establish a minimum investment.

03 Submit your instruction

Confirm the amount and required acknowledgements. An instruction is not accepted merely because it has been submitted.

04 Receive confirmation

An accepted subscription is recorded separately from available wallet funds. The confirmation establishes the applicable dates and terms.

The account presents the applicable subscription limits and service availability before an instruction can be confirmed. Only settled, eligible funds can be reserved. If an instruction is declined or cancelled before acceptance, its reservation is released without creating an Income holding. Restricted accounts or unmatched payments may require further verification. Income is not attributed to a period before the confirmed start date.

Income calculation & fees

The displayed annual targets already reflect the 0.50% p.a. product management fee.

$$\text{Illustrative income} = \text{principal} \times \text{net annual target} \times \text{term days} \div 365$$

For 1,000 USDT over 180 days, the illustration is $1,000 \times 4.50\% \times 180 \div 365 = 22.1917808$ USDT, displayed as 22.19 USDT. A daily target-equivalent calculation is an accrual illustration, not a promise of a daily cash payment.

Income records and settlement

Holdings may display target accruals and subsequently confirmed income. The interface and statements must distinguish estimated amounts, confirmed amounts and amounts paid. Seeing a number on a daily chart does not mean that the same amount can be withdrawn that day. The settlement statement distinguishes the target illustration from the realized result, identifies any shortfall and shows the actual amount payable. Income is settled with the holding at maturity under the subscription terms; a daily record is not a separate daily distribution.

Fee or cost	How it is presented
Product management fee	0.50% p.a., already reflected in the net target rates. It is not deducted a second time from the stated net target income.
Purchase and exchange services	The quote may include an exchange-rate margin. Review the total amount payable and net amount receivable before accepting.
Card funding and card use	Separate services, with applicable fees and the resulting credit shown under the relevant quote or card terms.
Blockchain transfers	Network or transfer costs may apply where a blockchain withdrawal is requested.
Taxes	Personal tax treatment is not included in the displayed target rates.

“Net target” means after the stated product management fee. It does not mean after all purchase, exchange, transfer, card or personal tax costs. No claim is made that this product is fee-free.

The product fee schedule supplied before confirmation identifies the calculation base, collection timing and fee recipient. There is no second 0.50% deduction from the stated net target income. A separate service charge requires its own disclosed quote; it is not silently deducted as another management fee. Internal trading costs and commercial margins are not represented as investment returns.

Management, governance & asset holding

A defined governance process, with legal responsibilities set out in the subscription documents.

Eternova institutional background

The governance design draws on the framework described in the 2025 Investment Memorandum for Silver Fern No.1 Fund. That document identifies Eternova GP Limited as the general partner and records FSP554706 as its financial service provider reference, with responsibilities for operations, compliance oversight and fiduciary duties. Its framework includes an investment committee, risk committee, non-executive oversight and documented decisions. [2]

This is institutional background, not a statement that Silver Fern No.1 Fund issues or guarantees GEX USDT Income. The legacy fund's assets, investor rights and third-party appointments are not transferred by this memorandum. An FSP reference is not, by itself, a financial-services licence or product approval. [3]

Function	Responsibility within the product
GEXFI customer interface	Product information, account access, subscription records, statements and wallet / card service connections.
Issuer and contracting party	The entity named in the subscription agreement assumes the obligations stated there. Customers receive its legal name and the nature of their claim before committing funds.
Investment management	The manager identified in the subscription documents administers allocation, exposure limits and income settlement under its mandate.
Asset holding and custody	The asset-holding terms identify the actual account holder, custody arrangements and customer rights. A bank deposit provider is not described as an independent custodian merely because it holds a deposit.

Investment and operational controls

The control framework separates investment approvals, treasury execution, financial reconciliation and risk review. It provides for recorded decisions, related-party conflict review and escalation of discrepancies. Internal oversight is distinct from any separately contracted audit, trustee or statutory supervision service.

Assets and customer rights

USDT is the denomination of the product, not a promise that all assets remain in USDT. The asset strategy uses fiat bank deposits and cash-liquidity arrangements, with conversion and hedging managed internally. Customers should read the asset-holding terms for legal ownership, segregation, control and insolvency treatment. A customer ledger is not, by itself, proof of a trust, security interest or independent custody.

Maturity & redemption

Redemption follows maturity and settlement; it is not an on-demand withdrawal.

01

Maturity reached

The holding enters its maturity settlement process. An elapsed term does not, on its own, create available wallet funds.

02

Income and payable amount confirmed

The settlement statement records principal, actual income, applicable disclosed deductions and the net redemption amount.

03

Wallet credited

The payable USDT amount is credited to GEXFI Wallet once settlement and required checks are complete. A processing record is not a completed credit.

04

Funds used or reinvested

After credit, the customer can select available wallet, transfer or card services. A new subscription requires its own accepted instruction.

Settlement timing

The timing and business-day convention applicable to an order are supplied before confirmation and retained with that order. The account displays the expected settlement date and progress. Maturity does not imply T+0 payment, and an internal wallet credit does not mean that a bank or card has also been credited.

Early exit and cancellation

An instruction can only be cancelled before acceptance where the account permits it. Accepted fixed-term holdings are not available for ordinary early withdrawal. Any exceptional exit permitted by law or accepted under the agreement is assessed separately; the quoted income adjustment and disclosed costs require the customer's acceptance. No secondary-market buyer or platform repurchase is promised.

Delays, failed settlement and renewal

A required verification, account restriction, disputed instruction or execution failure may interrupt settlement. The customer record preserves the amount, reason and status until resolution; a failed transaction is not labelled completed. Customer communications follow the applicable agreement. No automatic renewal is assumed: reinvestment requires a new instruction or an express mandate, with the new term and rate disclosed in advance.

Wallet, card & digital records

Connected services, with separate balances and a clear transaction record.

Wallet first, card second

At the end of the redemption process, funds return to GEXFI Wallet. Card funding is optional and separate. A customer is not required to load a card in order to receive a redemption to the wallet. Card availability, limits and acceptance depend on the relevant card programme.

Before a card funding transaction, the customer should be shown the funding asset, quoted rate, applicable charges, amount to be credited, quote validity and expected processing terms. USDT-denominated holdings are not automatically USD-denominated card money, and no 1:1 conversion is assumed.

Record	What it establishes
Subscription confirmation	The accepted order, amount, term, dates and applicable document version
Income record	Whether an amount is an estimate, a confirmed allocation or a payment
Redemption record	The request, progress and actual settlement outcome
Wallet / card transaction	The separate transfer, conversion or card credit actually completed
Blockchain receipt, where implemented	Evidence of the stated transaction on the stated network, subject to confirmation

On-chain evidence

If a blockchain record is made available, the network, transaction hash, record type and confirmation status should be identified. A receipt does not independently establish ownership of every underlying asset, the solvency of the issuer or a guaranteed investment value.

A digital receipt does not, by itself, create a tradable investment token, free transferability or a secondary market. Any verification link must correspond to an actual record on the stated network. No sample hash is evidence of a live transaction.

Security and corrections

Customers should verify instructions through their account and report discrepancies promptly. Corrections to records should preserve the original transaction trail and explain the change. Public blockchain records must not be treated as a substitute for the investment agreement.

Principal risks

Consider the potential loss and access restrictions alongside the target rate.

Risk	What it can mean for the customer
Capital and performance	The target may not be achieved. Losses may reduce income or principal; a target rate is not a contractual guarantee of payment.
Issuer and counterparty	Failure of the issuer, bank, execution provider or another counterparty may delay payments or cause loss. Legal recourse depends on the subscription agreement and applicable law.
Liquidity and maturity	Assets may not be immediately realizable. Fixed terms, settlement delays or permitted suspensions can restrict access to funds.
Currency and hedging	Non-USDT asset exposure, exchange movements, hedge mismatch or counterparty failure may affect realized USDT results. Hedging does not remove every risk.
USDT and market value	USDT can trade away from USD parity. Issuer terms, eligibility, liquidity or restrictions can affect transfers and redemption. [1]
Custody, operations and technology	Key loss, unauthorized access, fraud, record errors, outages or service-provider failure may affect assets and transactions.
Legal, tax and service changes	Applicable requirements or provider terms may change, affecting availability, costs, reporting and execution.

What is not represented

No claim is made that a regulator, bank, card network or Tether has approved, insured or guaranteed GEX USDT Income. Internal account records do not establish independent custody, asset insurance or statutory deposit protection for an Income holding.

Risk information is not exhaustive

Customers should read the applicable asset-holding and subscription terms and obtain advice appropriate to their circumstances and should not rely solely on a calculator, promotional headline or on-chain record when deciding whether to subscribe.

[1] Tether, [Token Terms of Sale and Service](#) and incorporated risk disclosures, reviewed 8 October 2026. These are third-party token terms, not the GEX product agreement and not evidence of a partnership.

Agreements, support & document control

Product information and transaction-specific terms are read together.

This memorandum, version 1.0 dated 8 October 2026, describes the GEX USDT Income range. It is a product-information document, not an executed subscription agreement, a licence certificate or evidence that a transaction has been accepted.

Your contract and records

Before a commitment of funds, the customer receives the subscription agreement identifying the contracting entity, the investment entitlement, management and asset-holding terms, applicable fees, settlement arrangements, governing law and dispute process. The order confirmation then records the accepted amount, rate, term, start and maturity dates, and acknowledged document version. Browsing a webpage or using the calculator does not accept an order.

Document	Purpose
Investment Memorandum	Explains the product range, target rates, eligibility, fees, governance and principal risks.
Subscription agreement and asset-holding terms	Identify the legal parties, obligations, ownership arrangements and customer rights for the subscription.
Order confirmation and settlement statement	Record the specific transaction and its actual settlement outcome.
Wallet, exchange and card terms	Govern the separately selected services and their transaction quotes.

Language and changes

English and Chinese versions share the same product parameters and version number. Any controlling-language provision is stated in the accepted agreement. A material discrepancy should be resolved before confirmation. Later website changes do not silently replace the terms of an accepted subscription; records retain the version supplied to the customer.

Support and complaints

Contact GEXFI at info@gexfi.com or through the secure account channel. Quote the order reference and describe the issue. Never send passwords, private keys or complete card credentials. Complaints are directed to the responsible service provider under the accepted agreement; any applicable external dispute-resolution route is stated there.
